Managing Calamities through Innovative ICT Solutions & Systems

Currently the nation is faced with multiple calamities; some natural and others man-made hence it would be prudent to find ways to facilitate the agencies and entities trying to manage flood water and Dengue virus using ICTs. The outbreak and spread of these disasters could be averted besides mitigating their damaging effect on both life and property.

Industry, academia, NGOs, and R&D institutions specially those already trying to mitigate the effects are encouraged to apply for funding to develop mapping and modeling software or enhance the functionality, use, and outreach of pre-existing solutions.

National ICT R&D Fund is funding projects targeted towards the innovative use of ICTs and development of ICT solutions and systems on a fast track basis to combat this menace.

Application forms available on our website.
