NDMA'S

Detailed Roles & Responsibility Matrix for Implementation of NDMP- III 2024

1. <u>Priority Interventions and Actions by Major Hazard (Flood, Earthquake, Landslide and Drought):</u>

a. Floods

			Linkage with		Execution	Agency
Strategy	Intervention	Action	SFDRR	Main	Support	Action
Flood Risk Reduction	Update the National hazard & risk assessment and its database	National database development of the historical flood disasters and its impact	Priority 4	NDMA	SUPARCO, NDRMF	SUPARCO: Utilize remote sensing and GIS expertise to update the national hazard and risk assessment. NDRMF: Provide financial support for updating the national hazard and risk assessment and developing the national database. Allocate funds for equipment procurement, capacity building, and other necessary activities. NDMA: Prepare inclusive and crosscutting gender,

Update runoff and inundation analysis model	Development of risk atlases including flood hazard, risk maps with catalogues (National Level)	Priority 2	NDMA,	FFC, SUPARCO, NDRMF, PBS	disability, children and old age plans which focus on historical impacts on vulnerable populations. FFC: Contributes expertise and data related to flood hazard assessment to enhance the accuracy and comprehensiveness of the national risk assessment. SUPARCO: Provides satellite imagery and geospatial data for the development of risk atlases and flood hazard maps, supporting better risk management planning. NDRMF: Supports the funding and implementation of initiatives aimed at updating the national hazard and risk assessment database, facilitating better risk management practices.
					· ·

			disaggregated data management support to ensure the accuracy and reliability of the updated hazard and risk assessment database.
Development of probabilistic flood hazard and risk maps along the Indus River with CC Impact	NDMA	FFC, NDRMF, SUPARCO	FFC: Provides technical expertise and data on flood dynamics specific to the Indus River, ensuring the accuracy of hazard and risk maps. NDRMF: Facilitates financial support for initiatives aimed at developing probabilistic flood hazard and risk maps, enhancing flood risk management. SUPARCO: Utilizes satellite technology and geospatial data to enhance the precision and effectiveness of flood hazard and risk mapping along the Indus River.

	Research studies on selected cities prone to urban flooding		MCs and Developme nt Authorities	SUPARCO, Academia and NDRMF	Academia collaborate SUPARCO NDRMF.	will with and
Update the National hazard & risk assessment and its database Planning for better risk management	Mapping the Nullahs/hill torrents responsible for flash flooding	Priority 4	PIDs	FFC, PDMA, NDMA	data on torrents of comprehens mapping for hazard assessment PDMA: (with NDMA agencies localized insights for Nullahs/hill within their provinces on populations women, chill and disabled PIDs: Offer knowledge hydrology flow patter respective aiding in the mapping of	the national and risk that database. Collaborates and other to provide data and or mapping torrents respective and impacts vulnerable specifically dren, elderly

			hazard and risk assessment database. FFC: Oversees the
National Drainage Master Plan (Undertake hydrological modeling and food-plain mapping and zoning of the Indus River system using climate change scenarios to estimate various projected flood levels)	FFC	PID	implementation of the National Drainage Master Plan, focusing on undertaking hydrological modeling and floodplain mapping of the Indus River system. It integrates climate change scenarios to estimate various projected flood levels. PID: Collaborates with FFC to provide localized data and insights for hydrological modeling and floodplain mapping within their respective provinces. They contribute to the zoning of the Indus River system and ensure alignment with provincial development plans and policies.

O&M Plan of the Bunds of Indus River	PID	FFC	PID: Takes charge of the O&M Plan for the bunds of the Indus River within their respective provinces. This includes regular inspections, repairs, and upkeep to ensure the structural integrity and effectiveness of the bunds in flood protection. FFC: Provides technical guidance and support to PID in the development and implementation of the O&M Plan for the bunds of the Indus River. They may also coordinate interprovincial aspects and ensure adherence to national standards and protocols.
Development of the Bund Training Manuals	PID	FFC	PID leads the development of Bund
Development of planning & design criteria	PID	FFC	Training Manuals and planning & design criteria, with support from FFC, ensuring standardized guidelines and procedures for bund

Update and formulation of Laws and (Technical-)	Guidelines of CC Impact involvement to Flood Protection Plan and Design	Priority 4	FFC	MoCC, PMD, PID	construction and maintenance along the Indus River. FFC prioritizes updating laws and technical guidelines, focusing on integrating climate change considerations into flood protection plans, collaborating with MoCC, PMD, and PID. PID leads the revision of the National River Act in conjunction with FFC to ensure alignment with provincial flood management needs.
Guidelines and Act	Revision of National River Act		PID	FFC	PID spearheads regional expertise and insights, ensuring local perspectives in revising the National River Act, while FFC provides national-level guidance to align the act with federal flood management strategies.

		Preparation of Tools and System for Projects' Management Development of planning & design criteria	Priority 2	FFC	PID	FFC focuses on preparing tools and systems for project management, while PID leads the development of planning and design criteria.
Ma	lood lanagement levelopment	Establishment of Project Management System		FFC, PID	MoWR	FFC and PID working on the development of a Flood Disaster Risk Management Information System and sharing, alongside the establishment of a Project Management System, with support from MoWR
of Di Ma Int Sy	-	Update of hydro- metrological Information sharing mechanism and system	Priority 2	FFC	PID, WAPDA, PDMAs	FFC spearheads the development of a Flood Disaster Risk Management Information System and sharing, as well as the establishment of a Project Management System, with collaboration from PID, WAPDA, and PDMAs Additionally, PID leads the update of the hydrometeorological

Provision of technical experts/staff for flood risk analysis on Hill torrent and regional rivers Capacity enhancement to understand flood disaster mechanism and hydrological analysis	PID	FFC	information sharing mechanism and system. PID and FFC collaborate closely on flood management efforts, with PID supplying technical experts and staff for flood risk analysis on hill torrents and regional rivers, while FFC takes the lead in enhancing capacity to understand flood disaster mechanisms and conduct hydrological analysis. This partnership ensures a comprehensive approach to flood risk assessment and management, combining technical expertise with capacity-building initiatives.
Update of hydro- metrological Information sharing mechanism and system	PID	FFC	PID and FFC jointly undertake the update of hydro-meteorological information sharing mechanisms and systems, ensuring the

						timely and accurate dissemination of critical data for effective flood management and response efforts. PID leads institutional strengthening efforts to enhance resilience against floods, while
Institutional Improvement	Provincial-level institutional strengthening for robust flood disaster risk management	Provincial Level Flood Hazard & Risk Map Strengthen the capacities to address on the Flood DRM system	Priority 2	PID	PDMA NDMA	PDMA contributes to the development of provincial-level flood hazard and risk maps for informed decision-making. NDMA supports capacity-building endeavors aimed at strengthening the flood disaster risk management system, ensuring efficient coordination and response mechanisms within the provinces. NDMA ensures coordination and management of humanitarian stakeholders to ensure that flood disaster risk management is

					inclusive and targets gender specific risks.
of D M In S	Development of Flood Disaster Risk Management onformation System and sharing	Priority 2	PDMA	NDMA	PDMA and NDMA jointly lead the development of a Flood Disaster Risk Management Information System and sharing mechanism. This involves creating an integrated platform to collect, analyze, and disseminate critical flood-related data for effective decision-making and coordinated response efforts at both provincial and national levels. Inclusion of sex disaggregated data in the Disaster Risk Mangement Information System for sharing with humanitarian stakeholders.

b. <u>Landslides</u>

			Linkages		ition Agency	
Strategy	Interventions	Actions	with SFDRR	Main	Support Organizations	Action
Comprehensive Landslide Management: Assessment, Awareness, and Stabilization Strategies	Conducting landslide risk assessment	Conduct a landslide risk assessment for Northern areas of Pakistan at the macro scale Identify highly vulnerable areas for mitigating the landslides and slope instabilities Develop an Atlas of landslide hazard-prone areas and develop the profile	Priority 1	NDMA	PDMAs, Forest Department, Land Use Planning Department	disaggregated data to

						zoning and planning to identify areas where development activities could exacerbate landslide risks or where mitigation measures could be integrated into future land use plans. Collectively, the stakeholders work together to assess and mitigate landslide risks in the Northern areas of Pakistan, aiming to enhance resilience and reduce the impact of landslides on communities and infrastructure.
ommunity wareness	Conduct regular awareness campaigns to educate the public about landslide risks and safety measures. Provide training on recognizing early signs of instability and appropriate response actions. Promote social forestation to plant climate-	Priority 1	DDMAs	INGOs., I PDMAs NDMA	UNO, and	DDMAs: Coordinate and implement community awareness campaigns at the district level, ensuring the dissemination of accurate information about landslide risks and safety measures to the vulnerable populations to ensure that their needs are catered for. INGOs and UNO: Provide technical expertise, resources, and support to enhance the effectiveness of community awareness campaigns and training programs. Organize seminars and workshops on disaster related to

smart vegetation to stabilize slopes and reduce soil erosion in their field and near residential areas. Develop IEC material on disaster related issues for preventive measures in local languages and multiple mediums to ensure adequate female outreach and access to information. Engage female community-based organizations to reach the most marginalized in the communities. PDMAs: Oversee the implementation of community training programs, ensuring that residents are equipped with the knowledge to recognize early signs of instability and respond appropriately and ensure the inclusion of women, adolescent girls and persons with disabilities. 					populations specifically women, children, elderly and disabled.
	Construct retaining walls or terraces to break up steep slopes and minimize the risk of mass movement.				PDMAs Collaboration involves the Forest Department, Irrigation Department, and Land Use Planning Department.
Other with a river	Construct gravity retaining walls to support soil and reduce the risk of slope failure.		PDMAs	Forest	Construct retaining walls of terraces to break up steep slopes and minimize the risk of mass movement.
Strengthening land stabilization through structural measures	Use gabion walls (wire mesh baskets filled with rocks) to stabilize slopes and prevent erosion.	Priority 2		Department, Irrigation Department, Land use Planning Department	Construct gravity retaining walls to support soil and reduce the risk of slope failure. Utilize gabion walls (wire mesh baskets filled with rocks) to stabilize slopes and prevent erosion.
	Use bioengineering techniques such as erosion control mats and blankets for slope stabilization. Retrofit structures to				Implement bioengineering techniques like erosion control mats and blankets to stabilize slopes effectively, mitigating erosion risks and reducing landslide occurrences.

resistance to seismic activity, reducing the likelihood of landslidetriggering earthquakes.		Retrofit existing structures to enhance their seismic resistance, thus lowering the likelihood of landslide-triggering earthquakes and increasing overall structural stability. Ensure adequate WASH facilities in the retrofitted constructions.

c. <u>Earthquake</u>

			Linkages		Execut	tion Agency
Strategy	Interventions	Actions	with SFDRR	Main	Support organizations	Actions
	Establishment of a committee for the	Announcement and selection of the committee members		NDMA	Academic, PEC	
	evaluation of earthquake faults	Hold regular meetings for institutionalization	Priority 4	NDMA	Academic, PEC	
	and the practice of fault evaluation.	Assessing the active and non-active faults and their mapping		NDMA	Academic, PEC	
Enhancing Earthquake		Collect historical data of earthquake disasters, and update it with epicenter rupture / estimated intensity data		PMD	GSP, NDMA, PDMA, DDMA	NDMA, PDMA and DDMAs: Collect historical data on losses especially sex disaggregated of earthquake disasters i.e. total number of women, children, girls, elderly (male/female aged 55 yrs and above), persons with disabilities affected and other marginalized communities.
Monitoring and Assessment	Maintaining record and publication of	Present and approval from the committee	Priority 2	PMD	GSP, NDMA, PDMA, DDMA	
	epicenter rapture (real-time) and estimated intensity data	Information sharing about the seismic data to relevant government authorities (e.g., to EOCs)		PMD	GSP, NDMA, PDMA, DDMA	NDMA, PDMAs and DDMAs: Sharing the disaggregated data with Humanitarian stakeholders to Gender inclusive EQ response and Preparedness.
		Publication and dissemination of data and reports		PMD	GSP, NDMA, PDMA, DDMA	NDMA, PDMAs and DDMAs: Prepare and publish DRR plans according to the number of vulnerable communities residing on areas on and around active fault lines. Disseminate data and reports amongst stakeholders.

	Scenario earthquake-based seismic risk assessment of selected earthquake-prone cities deriving the geotechnical information including urban-level details, liquefaction, etc. Updating hazard assessment by probabilistic seismic risk assessment using soil amplification factors.	Suggested for long-term planning
Upgrading the Damage and Loss Assessments Procedures	Develop guidelines for an earthquake damage assessment (scenario-based earthquake micro zoning assessment)	
Capacity Enhancement of Human Resources for Earthquake Safer Construction	Training of the concerned technical officers of the government sector	

d. <u>Drought</u>

			Linkages Execution Agency		Agency	
Strategy			with SFDRR	Main	Support Organizations	Action
		Aggregation of data (water right, traditional water extraction without registrations. standard discharge for wet and dry season etc.)		IRSA	PCIW, MoWR	Collaboration involves PCIW and MoWR
Comprehensive Landslide Management: Assessment, Awareness, and	Numerical modeling on water allocation and case study with hydrological perspective	Analysis of flow duration curve for understanding water regime (High-, Normal-, Low- and Drought- Water) and its probability	Priority 1	IRSA	PCIW, MoWR	Conducting numerical modeling on water allocation and case studies with a hydrological perspective.
Stabilization Strategies	1.0	consumption amount by crops and irrigation		IRSA	PCIW, MoWR	Aggregating data on water rights, traditional water extraction without registrations,
		Establishment of the water allocation model		IRSA	PCIW, MoWR	and standard discharge for wet and dry
	Revision and update of current IRSA Act for smoothing	Case study on water allocation on dry seasons by using the model	Priority 2	IRSA	PCIW, MoWR	Analyzing flow duration curves to understand

	information consensus in terms of hydrological mechanism in the Indus River	Analysis of distribution during drought Revision and update of IRSA Act		IRSA	PCIW, MoWR	water regime variations (High-, Normal-, Low-, and Drought-Water) and their probabilities.
	Planning on improvement and construction of structural measures for water storage	Improvement and construction of reservoirs and ponds	Priority 2	PID	OCEA	PID collaborates with OCEA for planning and implementing structural measures for water storage, including the improvement and
Promotion of Water conservation and harvesting	Promotion of water-saving agriculture and update of cropping pattern information	Study and planning of appropriate watersaving agriculture	Priority 2	PID	OCEA	construction of reservoirs and ponds. PID and OCEA work together to promote water-saving agriculture and update cropping pattern information, facilitating efficient water us
	Implementation of constructions and improvement of water storage, conveyance and field distribution structures	Improvement and construction of ponds and reservoirs; improvement of irrigation efficiency such as lying channels, dripping pipes and sprinkler; and water harvesting measurements with	Priority 3	PID	OCEA	PID and OCEA jointly implement constructions and improvements related to water storage, conveyance, and field distribution structures. This includes improving ponds and reservoirs, enhancing irrigation

climate change	efficiency through
viewpoints	measures such as lying
	channels, dripping
	pipes, and sprinklers,
	and implementing
	water and rain
	harvesting strategies
	with considerations for
	climate change.

2. <u>Priority Interventions and Actions for Miscellaneous Hazards</u>

a. Smog

			Linkages		Execution	Agency
Strategy	Interventions	Actions	with SFDRR	Main	Support Organizations	Action
Comprehensive smog management through effective assessment and planning	Urban Smog Risk Assessment and Management for Lahore and Karachi	Conduct smog risk assessment of Karachi and Lahore cities Mapping of vulnerable areas and developing a catalog Development smog risk assessment report and its dissemination to concerned organizations Conduct awareness-raising sessions at the city level	Priority 1	PDMAs	Urban unit, LDA and KDA	Authority (LDA), and Karachi Development Authority (KDA). Conducting smog risk assessments for
	Develop Provincial level smog contingency plans	Develop a provincial- level smog contingency plan for Punjab Province Conduct proper consultations with key stakeholders	Priority 2	PDMAs	Urban unit, LDA, District Administration	Karachi and Lahore cities, mapping vulnerable areas, developing a catalog, and disseminating a smog risk assessment

	Develop a draft plan for review Organize a one-day validation workshop to refine the plan Publication and wide dissemination Promote the use of				report to concerned organizations.
Continue awareness- raising sessions and campaigns	public transportation Compliance with strict emission standards Implement effective waste management practices to reduce open burning of waste, a significant contributor to air pollution Enforce and improve traffic management strategies to reduce traffic-related emissions Encourage public transportation to reduce the number of individual vehicles on the road, thereby decreasing emissions.	Priority 3	EPAs	INGOs., UNO, DDMAs, PDMA and NDMA	coordination and implementation of smog management initiatives. Organize awareness campaigns. Enforce emission standards. Collaborate for effective waste management. INGOs and UNO: Provide technical expertise and support. Formulate and disseminate awareness campaigns which are gender inclusive and focus on specific needs and concerns of vulnerable populations. Support public transportation improvement projects

		which are gender inclusive. DDMAs, PDMAs, and NDMA: Collaborate in smog management.
		Coordinate awareness efforts to ensure maximum outreach to vulnerable populations. Enforce traffic policies. Support waste management practices.

b. <u>Heatwave</u>

			Linkag		Execution	Agency
Strategy		es with	Main	Support Organizat ions	Action	
Integrated Heatwave Preparedness and Response System	Comprehensive heatwave management framework: coordination, contingency, and alert	Develop a coordination committee among the PMD, NDMA, DDMAs, health department, and development authorities to keep vigilance of heatwaves during the summer season. Develop contingency plans for cities exposed to heatwave	Priority 4	NDMA	PDMAs, PMD	NDMA Coordinates with PMD, DDMAs, health department, and development authorities. Provides guidance for effective coordination and contingency planning. PMD: Provides meteorological expertise and issues heatwave alerts. PDMAs: Support NDMA in coordination and implementation

	Predict and share forecasts, advisories, and alerts with relevant government and non-government stakeholders	Issue heat alerts based on the PMD advisory with the guidance of recommended thresholds and issue daily weather outlook and its dissemination to wider audiences.	Priority 3	PMD	Electronic, PEMRA, Press clubs, PDMAs, developm ent authorities	coordination committee establishment heatwave preparedness. Coordinates PMD, DDMAs, department, development authorities. 	weather events.
	weather events.

	Emergency Shelter Planning	Prepare snowstorm/winter contingency plans at the district levels to prepare for swift emergency response. Identify and designate emergency shelters in vulnerable areas. Equip shelter places with proper heating, blankets, food, and medical supplies. The local authorities should prepare efficient evacuation plans and transportation during snow emergencies.	Priority 1	DDMAs	PDMAs, INGOs, UNO	DDMAs lead this initiative, collaborating with PDMAs, INGOs, and UNO. The aim is to ensure efficient coordination and preparedness for emergency shelter and response during snowstorms and winter conditions. Ensure that the emergency shelters are gender inclusive and availability of gender inclusive WASH facilities.
Winter Resilience: Strengthening Infrastructure and Enhancing Emergency Preparedness	Resilient Infrastructure	Implement measures to strengthen critical infrastructure against snow-related damage, such as power lines and transportation networks. Regularly inspect and maintain infrastructure to prevent failures during heavy snowfall.	Priority 4	DDMAs	PDMAs, INGOs., UNO	Priority 4 focuses on implementing measures to strengthen critical infrastructure against snow-related damage. DDMAs lead the initiative, collaborating with PDMAs, INGOs, and UNO

	Plan for alternate rescue operations in case the roads are blocked Ensure the availability of snow removal equipment and road-clearing machinery.				The goal is to enhance the resilience of infrastructure, including power lines and transportation networks, to withstand the impacts of winter conditions and ensure continuity of essential services.
Emergency Preparedness	Train healthcare professionals to deal with cold-related illnesses and injuries. Stockpile medical supplies and coordinate with hospitals and clinics to ensure continued healthcare services during snowstorms. Maintain stockpiles of essential supplies, including food, water, medications, and fuel, in strategic locations.	Priority 4	PDMAs	NDMAs, DDMAs, District Administration, INGOs and UN	Priority 4 involves training healthcare professionals to manage cold-related illnesses and injuries. PDMA leads this initiative, collaborating with NDMAs, DDMAs, District Administration, INGOs, and UN. Additionally, stockpile medical supplies and gender inclusive hygiene management kits, and coordinate with hospitals

			and clinics	to ensure
			continued	healthcare
			services	during
