

November 25, 2025

Global Alerts

Strong Wind Hazard– Russia

Affected Areas

Arctic Coast, Northern Ural Region, parts of Western Siberia

Duration

25th to 27th November, 2025

Hazard Types

Strong/Gusty Winds

Hazard Summary

Strong winds are expected across northern regions, with gusts capable of causing structural damage, downing branches, and blowing snow. Wind-driven snow may trigger sudden visibility loss, especially along highways and open terrain. Outdoor exposure should be minimized, and unsecured items must be fastened to prevent wind-related hazards.
