

November 25, 2025

Global Alerts

Freezing Rain – Russia

Affected Areas

Central Russia, Northwestern Russia, parts of the Northern Ural Region

Duration

26th to 27th November 2025

Hazard Types

Freezing Rain & Ice Accumulation

Hazard Summary

Intermittent rain transitioning to freezing rain is projected to generate dangerous ice buildup on roads, bridges, and exposed surfaces. Severe travel disruption, heightened collision risk, and potential stress on power infrastructure are likely. Travel should be restricted, and preparations for possible power outages are advised.
