Snowfall in Iceland

Affected Areas

Reykjavík, Stykkishólmur, Ísafjörður, Akureyri, Egilsstaðir, Höfn, Vík

Duration

February 25 – March 1, 2026

Hazard Types

Snowfall, Freezing rain

Hazard Summary

In the next five days, Iceland is expected to experience snowfall and freezing rain across the region. The island country is within continuous low-pressure zone; it is expected that temperature drop will occur as cold winds from the north are active and clouds are expected to remain persistent over most of the area. Furthermore, strong winds are expected and gusty conditions likely to cause difficult travel and reduced visibility.
