## Heavy Rainfall in Malawi and Mozambique

### Affected Areas

**Malawi:** Lilongwe, Mangochi, Blantyre, Southern Lake Malawi area

**Mozambique:** Lichinga, Metarica, Gurue, Riane, Marrupa, Insaca

### Duration

February 09 – 14, 2026

### Hazard Types

Heavy rainfall, Thunderstorms, Flooding

### Hazard Summary

Rainfalls are expected to affect the African countries of Malawi and Mozambique in the coming week. The affected countries are currently undergoing their wettest period where total rainfall range from 50-100 mm within a week. The expected rain accumulation during this week is ~ 82 mm, which is not considered an anomaly in given period of time. However, intense rainfall can also lead to flooding in the local areas which can affect the population living in respective areas.
