

25 February, 2026

## Heavy Rainfall & Flood - Northern Peru

Valid: 25 – 27 February 2026

### Affected Areas

Northern Peru including Tumbes, Piura, Lambayeque, Cajamarca, and surrounding lowlands and foothills.

### Hazard Types

Heavy Rainfall, Flash Flooding, Riverine Flooding, Landslides

### Hazard Summary

Active weather models, indicate persistent moderate to locally heavy rain showers across northern coastal and highland zones over the next 48–72 hours. Enhanced thunderstorm activity and organized rain bands will increase surface water accumulation, raising the risk of localized flooding and flash floods, especially in low-lying towns, river valleys, and unstable slopes where soils are already moist.
