

## Severe Windstorm & Snowfall Event across Parts of Europe

Valid: Form Next One Week

### Affected Areas

Northern and western Europe, particularly northern France (coastal areas), extending eastward into Germany, with impacts also affecting parts of Benelux, the United Kingdom, and Central Europe.

### Hazard Types

Severe Windstorm, Damaging Wind Gusts, Heavy Snowfall.

### Hazard Summary

A rapidly intensifying low-pressure system is impacting parts of Europe, generating extreme wind gusts along northern France's coast, locally exceeding 200 km/h, associated with a powerful wind feature embedded within the storm. As the system moves eastward, it is introducing cold air and heavy snowfall across Germany, increasing risks of travel disruption, power outages, and localized damage. Hazardous conditions are expected to persist as the system continues across central Europe.
