

# Weather Advisory (01<sup>st</sup> June to 06<sup>th</sup> June, 2026)

National Emergency Operation Centre – National Disaster Management Authority

Hot and dry weather is expected over most parts of the country during 01–06 June due to prevailing continental conditions. However, a weak westerly disturbance interacting with moist air may generate scattered rain-thunderstorms over upper Punjab, KP, GB, and AJK, with increased activity from 04–06 June, while isolated thunderstorms are also possible in parts of Sindh and Balochistan.

## Punjab:

The province is expected to experience scattered rain-thunderstorms in districts including Murree, Rawalpindi, Attock, Chakwal, Jhelum, Islamabad, Gujrat, Sialkot, Narowal, Lahore, Sheikhupura, Hafizabad, Mandi Bahauddin, Gujranwala, Faisalabad and adjoining areas from 01–06 June. Rainfall activity is expected to increase during 04–06 June, particularly over upper and northeastern Punjab

## Balochistan:

Most parts of the province are expected to remain hot and dry during the forecast period. However, isolated rain-thunderstorm activity may occur in Zhob, Musakhel, Barkhan, Sherani, Quetta, Ziarat and adjoining areas.

## Sindh:

No significant rainfall is expected. However, isolated light showers or dust-thunderstorm activity may occur in Karachi, Thatta, Badin, Tharparkar, Umerkot and adjoining areas. Most of the province is expected to remain dry.

## KP:

The province is expected to experience scattered to widespread rain-thunderstorms in districts including Chitral Upper & Lower, Dir Upper & Lower, Swat, Shangla, Kohistan Upper & Lower, Battagram, Torghar, Mansehra, Abbottabad, Haripur, Buner, Malakand, Bajaur, Mohmand, Khyber, Mardan, Swabi, Peshawar, Nowshera, Kohat, Hangu, Kurram and adjoining areas during 01–06 June. More widespread activity is expected from 04–06 June.

## GB & AJK:

Frequent rain-thunderstorm activity is expected during the entire forecast period. Gilgit, Hunza, Skardu, Ghizer, Diamer, Astore, Neelum Valley, Muzaffarabad, Bagh, Poonch and adjoining areas are likely to receive the highest rainfall accumulations.
