

## Heavy Rainfall Argentina

### Affected Areas

La Angostura, San Carlos de Bariloche, and San Martín de los Andes Argentina  
August 11<sup>th</sup> -12<sup>th</sup> 2025

### Hazard Types

Heavy Rainfall/Flooding

### Hazard Summary

A broad zone of intense rainfall is currently affecting the southern Andes region of Argentina, with particularly heavy precipitation observed over areas stretching from Villa La Angostura to San Carlos de Bariloche and San Martín de los Andes. Accumulated totals may range from **60 to 90 mm**, with localized amounts exceeding 100 mm possible. The red and orange zones indicate very high rainfall intensity, which could lead to flash flooding in low-lying areas.
