

27 February, 2026

Rainfall & Flood Risk Forecast - Bolivia and Southeast Peru

Valid: 28 Feb – 03 March 2026

Affected Areas

Bolivia especially Santa Cruz, Beni, Cochabamba, La Paz, Tarija

Southeast Peru including Madre de Dios, Puno, Cusco Apurímac, Arequipa

Hazard Types

Heavy Rainfall, Thunderstorms, Flash Flooding, Riverine Flooding, Landslides

Hazard Summary

Forecast indicates persistent moderate to locally heavy rainfall across Bolivia and southern Peru. The highest rainfall potential is expected over Bolivian lowlands and Andean foothills as well as southern Peruvian regions including Madre de Dios, Puno, Cusco, and adjacent areas. These conditions may lead to localized flash flooding, rising river levels, and landslides, particularly in low-lying zones, river basins, and steep terrain, where short-duration intense rainfall could trigger rapid runoff.
