

Extreme Rainfall – Philippines

Potentially Affected Areas

Eastern and central Visayas including Leyte (Tacloban), Samar, Bohol, Cebu, and northeastern Mindanao including Surigao provinces and Agusan del Norte.

Hazard Types

Extreme rainfall

Hazard duration

24/01/2026 to 26/01/2026

Hazard Summary

Heavy to locally intense rainfall with thunderstorms is ongoing over parts of the central and eastern Philippines due to enhanced moisture convergence. Flash flooding, riverine flooding, and landslides are possible, especially in low-lying areas, river basins, and steep terrain. Gusty winds, poor visibility, and hazardous marine conditions may occur. Residents and authorities are advised to remain alert, monitor updates, and take necessary precautionary measures.
