Heavy Rainfall and Snow in Bosnia and Herzegovina

Affected Areas

Central and south-western Bosnia and Herzegovina will be mainly affected, including Bugojno, Banja Luka, Bihac, Mostar, and surrounding mountainous areas. The impacts extend toward the Herzegovina region, with reduced intensity toward the north and northeast.

Duration

January 24, 2025 – January 28, 2026

Hazard Types

Heavy Rain, Strong winds, Heavy Snowfall Freezing Rain

Hazard Summary

Strong winds coming from the Mediterranean Sea are expected to bring heavy rainfall and snow along and are expected to bring severe weather conditions in Bosnia and Herzegovina. The region is experiencing widespread precipitation, with heavier intensity over mountainous terrain. Impacts weaken toward northern and northeastern parts of the country.
