## High coastal tide warning in Europe

### Affected Areas

Portugal (Lisbon, Porto), Spain (Vigo, A Coruna, Burela, Luarca), France (Bayonne, La Rochelle, Brest, Saint Nazaire, Saint Malo), United Kingdom (Poole, Southampton, St. Davids), Ireland (Dublin, Greystones)

### Duration

January 24 - January 30, 2025

### Hazard Types

High tides, coastal waves, coastal flooding

### Hazard Summary

Due to a low-pressure system developed in the northern Atlantic and relatively high pressure in the relative south, strong winds have started moving eastward in the northern part of the Atlantic Ocean. These winds are expected to bring high tides in the coastal areas of western European countries, which can also result in coastal flooding.
