## Rainfalls in United Kingdom

### Affected Areas

Wales (Aberystwyth, Swansea, St Davids, and Wrexham), England (Birmingham, Gloucestershire, Bristol, Somerset and nearby areas), South England (Newbury, Southampton, and London), Central England (Nottingham and Milton Keynes), Northern Scotland (Aberdeen).

### Duration

January 23-26, 2026

### Hazard Types

Heavy Rain, Coastal Flooding, Damaging winds

### Hazard Summary

A low-pressure system developed on the Atlantic Ocean at the latitude of around 48° has started moving northward and is expected to affect the south-west coastal areas of the United Kingdom with rainfalls and strong winds, whereas, moisture-carrying westward winds are also expected to bring high rainfall and snow in the central and northern part of United Kingdom.
