WILDFIRE ACTIVITY – CHILE

Valid January 2026

Affected Areas

Central & Southern Chile (Biobío, Nuble, Maule, Valparaíso)

Hazard Types

Wildfires, Extreme Heat, Strong Winds, Poor Air Quality

Hazard Summary

Ongoing severe wildfire activity is affecting central and southern Chile due to prolonged dry conditions, extreme temperatures, and gusty winds. Rapid fire spread has been reported, resulting in casualties, large-scale evacuations, and damage to residential areas and forest land. Smoke plumes are degrading air quality and reducing visibility across affected regions. Firefighting and emergency response operations are ongoing. Overall impacts are assessed to be high.
