

November 25, 2025

## Global Alerts

### Freezing Rain – Russia

#### Affected Areas

Central Russia, Northwestern Russia, parts of the Northern Ural Region

#### Duration

26<sup>th</sup> to 27<sup>th</sup> November 2025

#### Hazard Types

Freezing Rain & Ice Accumulation

#### Hazard Summary

Intermittent rain transitioning to freezing rain is expected to produce dangerous ice buildup on roads, bridges, and exposed surfaces. This may lead to severe transport disruptions, increased accident risk, and potential power line stress due to ice load. Authorities and the public are advised to limit travel and prepare for possible power interruptions.
